Introduction

The Semester Management System (SMS) is a comprehensive software solution designed to streamline and automate various academic processes within educational institutions.It serves as a centralized platform for managing student records, course scheduling, grading, communication, and other essential administrative tasks.This presentation will explore the key features and benefits of an SMS and highlight its significance in enhancing academic efficiency and organization.

Cont...

SMS facilitates the creation and maintenance of a centralized student database.

The SMS simplifies the process of creating and managing course schedules.

The system allows for easy customization of grading criteria, weighting, and scales.

Teachers can easily mark attendance, and students can view their attendance history

Administration can access data on student enrollment , performance, attendance and other key metrics

software used:

Apache Netbeans

THANK YOU
